

- Decreased Asset Downtime
- ZERO HARM
- Experienced Maintenance Crew
- Fully Managed Site

Patricks Container Terminal Port Botany NSW

ATIVO continue to deliver Patricks with quality managed contract maintenance solutions

Patrick is Australia's leading provider of port-related services to importers, exporters and shipping lines. Since 2003 ATIVO have provided Patricks with a tailored maintenance solution to service their Port Botany NSW facility.

This contract maintenance project involves the carrying out of both corrective and preventive maintenance on all mobile equipment at the Port Botany site. This requires the utilisation of various trades including plant and motor mechanics, general and auto electricians. Maintenance fitters are also employed to provide support across all areas. This includes maintenance on all cranes, forklifts and straddles.

With a permanent on site office and management team inclusive of a full time contract manager and administrative support, this project on average requires 53 people on site, including casual and permanent crews on a shift roster.

Since 2003 ATIVO has implemented several initiatives on site including the introduction of a preventive maintenance program which has seen impressive improvements in Patrick's fleet reliability. After an initial analysis of the shift system ATIVO implemented improved crew rostering methods which gave more support to Patrick's operational needs and the flexibility to maintain crewing levels during peak box moving periods.

ATIVO have and will continue to provide Patricks with a consistent low asset downtime rate due to the provision of accredited crews and quality maintenance regimes all with an unprecedented safety performance.
